DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, drawn to a method for constructing an expression library, classified in class 435, subclass 91.4+.
 - II. Claim 5, drawn to an expression library, classified in class 435, subclass 320.1.
 - III. Claims 6-7, drawn to a method for screening for gene that is toxic to bacteria, classified in class 435, subclass 5.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions of Group I and Group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the different inventions as claimed have different method steps that have different functions and effects.

The method step of isolating genomic DNA from a culture of cells of Group I is not required by the claims of Group III. The method step of screening the expression library for a gene that is toxic to bacteria of Group III is not required by the claims of Group I.

3. Inventions of Group II (product) and Group I (process) are related as process of making and product made. The inventions are distinct if either or both of the following can be shown:

Art Unit: 1639

(1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product as claimed can be made by another and materially different process such as split pool synthesis.

4. Inventions of Group II (product) and Group III (process) are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different process such as the yeast two-hybrid system.

5. Because these inventions are distinct for the reasons given above and the searches required are not co-extensive thus requiring a burdensome search, restriction for examination purposes as indicated is proper. Additionally, different patentability considerations are involved for each group. For example, a patentability determination for Group III would involve a determination of the patentability of a method for screening for gene that is toxic to bacteria while a patentability determination for Group II would involve a consideration of the patentability of an expression library. These considerations are very different in nature.

Even though some of the groups are classified in the same class/subclass, this has no effect on the non-patent literature search. Different groups would require completely different

Art Unit: 1639

searches in non-patent databases, and there is no exception that the searches would be co-extensive.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
